

Dear FCC,

Since I have spent my hard earned money being an early adopter of televisions, and set-top boxes, that were marketed as being HDTV ready I am very concerned about the changes you are considering introducing into digital content.

Since none of the current crop of HDTV televisions have tuners built in all of them rely on set-top boxes. Since the RGB output of those set top boxes can not be protected the only choice available is to downgrade the output of the STBs to 480I instead of the 1080I that the system I paid for was marketed as being capable of.

I hope that you will not give the shaft to me and thousands of other consumers that helped to get the digital broadcast revolution off to a shaky start by making our equipment obsolete before it is even broken in.

As a consumer of digital content, I have a grave concern about the proposed Broadcast Flag. I enjoy the flexibility and control that technology gives me. I can be more than a passive recipient of content; I can modify, create and participate. Technology currently gives me more choices by allowing me to record a television program and watch it later; clip a small piece of TV and splice it into a home movie; send an email clip of my child's football game to a distant relative; or record a TV program onto a DVD and play it at my friend's apartment. The broadcast flag seems designed to remove this control and flexibility that I enjoy.

Historically, the law has allowed for those not affiliated with creating content to come up with new, unanticipated ways of using it. For example, Sony invented the modern VCR -- a movie studio did not. (Sony did not own a movie studio at the time.) Diamond Multimedia invented the MP3 player -- a recording label did not. Unfortunately, the broadcast flag has the potential to put an end to that dynamic. Because the broadcast flag defines what uses are authorized and which are not, unanticipated uses of content which are not foreseeable today are by default unauthorized. If we allow the content industry to "lock in" the definition of what is and is not legitimate use, we curtail the ability for future innovation - unanticipated but legal uses that will benefit consumers.

I am a law-abiding consumer who believes that piracy should be prevented and prosecuted. However, if theoretical prevention comes at the cost of prohibiting me from making legal, personal use of my content, then the FCC should be working to protect all consumers rather than enable those who would restrict consumer rights. In the case of the broadcast flag, it seems that it will have little effect on piracy. With file-sharing networks, a TV program has only to be cracked once, and it will propagate rapidly across the Internet. So, while I may be required to purchase consumer electronic devices that cost more and allow me to do less, piracy will not be diminished.

In closing, I urge you to require the content industry to demonstrate that its proposed technologies will allow for all legal uses and will actually achieve the stated goal of preventing piracy. If they cannot, I urge you not to mandate the broadcast flag.
